

## PBL Competence Profile

The objective of the workshop and the following preparation of a personal PBL competence profile is to develop a baseline for further developments of generic competences in the last part of your study. The workshops will include:

- A presentation of PBL competence profiling as a way to express the key competences and personal strengths developed by studying in a PBL environment.
- Examples of extracts from PBL competence profiles to strengthen students abilities to evaluate PBL competence descriptions based on pre-described criteria
- Exercises to start up students own PBL competence clarification and profiling
- Reflections on the PBL competence profiles as tools for further development

After the workshop, you should be able to finalise a first draft of your competence profile as an additional self-study activity of approx. 3 hours, and handing in this competence profile (as a minimum a standard page) will complete the course activity. You will however receive feedback on your profile to guide you in using this first iteration as a baseline for further development. Students have to note, that due to study-regulations this course activity has to be completed before attending the project exam (2<sup>nd</sup> semester Master or 6<sup>th</sup> semester Diploma).

The workshop, self-study activity and feedback have as learning objectives to enable students to:

- Explain the purpose, content and prospects of a PBL competence profile
- Evaluate PBL competence descriptions, including problem-oriented, structural, interpersonal as well as reflective PBL competences, based on predefined criteria
- Prepare a PBL competence profile based on own experiences from a PBL environment
- Reflect on the potentials to develop the PBL competence based on feedback

Furthermore, a synthesis of the feedback to students provides an input for the study-boards to target generic competence development and employability in the final year of study.
